## 1. Statement

Novelty (N)	Claims	1-6	YES
	Claims		NO

Industrial applicability (IA)	Claims	1-6	YES
	Claims		NO

## 2. Citations and explanations (Rule 70.7)

Closest prior art is DE-A-4413735. Said document discloses a method for the adjustment of the printed image of a rotary printing press, and the rotary printing press itself suitable for this purpose, as per the features in the preamble of claims 1 and 5 respectively.

The subject matter of claims 1 and 5 differs therefrom by virtue of the characterising part of said claims, namely that, in the event of variations in the print speed, the control unit generates further actuating signals, on the basis of which the actuators select the roll positions initially according to the print speed.

The subject matter of claims 1 and 5 is therefore novel (PCT Article 33(2)).

The problem solved by the features of claims 1 and 6 can be considered that of providing a method and device by which the fluctuations in the colour intensity of the printed image transferred are minimised.

The subject matter comprising the features of claims 1 and 5 is not suggested for the stated purpose by the

known documents either on their own or in combination.

Claims 1 and 5 therefore involve an inventive step and, together with the advantageous developments of dependent claims 2-4 and 6, satisfy the requirements of PCT Article 33(1) to (4).

**Box No. VIII      Certain observations on the international application**

The following observations on the clarity of the claims, description, and drawings or on the question whether the claims are fully supported by the description, are made:

1. According to independent claims 1 and 5, the selection of the roll position according to the print speed is a requirement of the present invention. The optional expression "can" in line 18 on page 3 of the description does not therefore support the subject matter of the present claims and thus does not meet the requirement of PCT Article 6.
  
2. The document DE10145925 referred to on pages 2 and 3 of the description relates to subject matter not of the type in question. If this was intended to equate to the document DE10145957 cited at the beginning of the description, this should have been stated.
